LockLine - Dual Beam Opening Fencing Modules

The **LockLine** is a very high quality modular fencing system. Every **LockLine** module consists of linear placed reinforced concrete blocks which contain two matching extendable high performance steel beams. The blocks contain running gears to ensure smooth and silent operation of the movable beams. Because the beams are placed non-centered and always move next to each other **LockLine** modules can be placed in line to achieve a strong but flexible fence barrier. **LockLine** barriers enable a sustainable and accessible fencing on sites where safety is a high priority issue. The reliable security system is able to shut down regions while quick access is guaranteed through the opening gates. To securely lock down the fence gateways, the system is equipped with locking devices. The robust fencing system stands out by simplicity and easy operation. It is immovable, unhackable and easy-care. **LockLine** fencing systems can be ordered in unlimited length and are assembled from two standard size fencing modules (7 m or 9 m block distances). The regular narrow **LockLine** blocks weigh about 3,000 kg. Alternatively, wider blocks of approximately 4,000 kg are possible.

Advantages

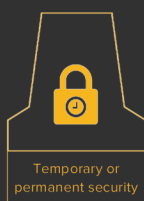

- Life-saving and secure
- Immovable and stable
- Sustainable
- Mechanical operation (not hackable)
- Unmanned closure (low staff costs)
- Quick access by emergency services
- Silent and smooth running gears
- Basic design
- Maintenance free
- Large gateway openings up to 8 m
- Attractively priced

Areas of Application

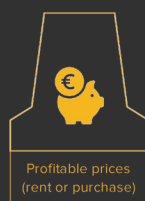

- Public environments
- Industrial sites / Building sites
- Music festivals, fairs, and sports events
- Forest and rural areas
- Ports and harbour sites
- Cargo storage and transshipment sites
- Cruise terminals
- Airports
- Military areas
- Medical centers
- Border crossings

SiteLock - Modular Fencing System

Separate combinations of adapted barrier blocks and beams can be assembled into a so-called **SiteLock** setup to achieve a fully fenced in area in rectangular and other shapes. **SiteLock** setups are basically built with narrow blocks of approximately 3,000 kg. The regular block distance is 6 m. Beams are placed in a semi-fixed position between the blocks and are not movable. To create openings **SiteLock** fencing systems can be expanded with **LockLine** modules or **LockBlock** gates of different widths. Tailor-made solutions are possible to meet specific customer needs.

LockLine Types

- LockLine LL-7000 * (regular, narrow blocks)
 - LockLine LS-7000 * (special, wider blocks)
 - LockLine LL-7000-T * (regular, three-block setup)
 - LockLine LS-7000-T * (special, three-block setup)
- * 7 m block distance; other dimensions possible

All **LockLine** modules, **SiteLock** fences, and **LockBlock** gates are expandable with several accessories such as electrical drive trains, camera systems, lighting, construction fences, special painting, and signage elements. See additional documentation for specific features on all products including gates and modules.

Additional Documentation
